27
28 # Level of log messages [1..9] (EMG, ALR, CRT, ERR, WRN, NTC, INF, DBG, ALL).
29 (default: 6 / NTC)
30 log_level 6
31
32 # Filter to log messages by type (COR, STR, ENC, NET, DBL, EVT, TRK, VID, ALL).
33 (default: ALL)
34 log_type all
35
36 #####
37 # Capture device options
38 #####
39
40 # Videodevice to be used for capturing (default /dev/video0)
41 # for FreeBSD default is /dev/bktr0
42 videodevice /dev/video0
43
44 # v4l2_palette allows one to choose preferable palette to be use by motion
45 # See motion_guide.html for the valid options and values. (default: 17)
46 v4l2_palette 17
47
48 # Tuner device to be used for capturing using tuner as source (default /dev/tuner0)
49 # This is ONLY used for FreeBSD. Leave it commented out for Linux
50 ; tunerdevice /dev/tuner0
51
52 # The video input to be used (default: -1)
53 # Should normally be set to 0 or 1 for video/TV cards, and -1 for USB cameras
54 # Set to 0 for uvideo(4) on OpenBSD
55 input -1
56
57 # The video norm to use (only for video capture and TV tuner cards)
58 # Values: 0 (PAL), 1 (NTSC), 2 (SECAM), 3 (PAL NC no colour). Default: 0 (PAL)
59 norm 0
60
61 # The frequency to set the tuner to (kHz) (only for TV tuner cards) (default: 0)

```

```
59 frequency 0
60
61 # Override the power line frequency for the webcam. (normally not necessary)
62 # Values:
63 # -1 : Do not modify device setting
64 # 0 : Power line frequency Disabled
65 # 1 : 50hz
66 # 2 : 60hz
67 # 3 : Auto
68 power_line_frequency -1
69
70 # Rotate image this number of degrees. The rotation affects all saved images as
71 # well as movies. Valid values: 0 (default = no rotation), 90, 180 and 270.
72 rotate 0
73
74 # Flip image over a given axis (vertical or horizontal), vertical means from left
75 # horizontal means top to bottom. Valid values: none, v and h.
76 flip_axis none
77
78 # Image width (pixels). Valid range: Camera dependent, default: 320
79 width 640
80
81 # Image height (pixels). Valid range: Camera dependent, default: 240
82 height 480
83
84 # Maximum number of frames to be captured per second.
85 # Valid range: 2-100. Default: 100 (almost no limit).
86 framerate 20
87
88 # Minimum time in seconds between capturing picture frames from the camera.
89 # Default: 0 = disabled - the capture rate is given by the camera framerate.
90 # This option is used when you want to capture images at a rate lower than 2 per
91 # second.
92 minimum_frame_time 0
93
94 # Full Network Camera URL. Valid Services: http:// ftp:// mjpg:// rtsp://
95 # mjpeg:// file:// rtmp://
96 # ; netcam_url value
97
98 # Username and password for network camera if required. Syntax is user:password
99 # ; netcam_userpass value
100
101 # The setting for keep-alive of network socket, should improve performance on
102 # compatible net cameras.
103 # off: The historical implementation using HTTP/1.0, closing the socket after
104 # each http request.
105 # force: Use HTTP/1.0 requests with keep alive header to reuse the same connection.
106 # on: Use HTTP/1.1 requests that support keep alive as default.
107 # Default: off
108 netcam_keepalive off
109
110 # URL to use for a netcam proxy server, if required, e.g. "http://myproxy".
111 # If a port number other than 80 is needed, use "http://myproxy:1234".
112 # Default: not defined
113 ; netcam_proxy value
114
115 # Set less strict jpeg checks for network cameras with a poor/buggy firmware.
116 # Default: off
117 netcam_tolerant_check off

167 # Motion Detection Settings:
168 #####
169
170 # Threshold for number of changed pixels in an image that
171 # triggers motion detection (default: 1500)
172 threshold 0
173
174 # Automatically tune the threshold down if possible (default: off)

```

```
175 threshold_tune off
176
177 # Noise threshold for the motion detection (default: 32)
178 noise_level 32
179
180 # Automatically tune the noise threshold (default: on)
181 noise_tune on
182
183 # Despeckle motion image using (e)rode or (d)ilate or (l)abel (Default: not defined)
184 # Recommended value is EedDl. Any combination (and number of) of E, e, d, and D is
    valid.
185 # (l)abeling must only be used once and the 'l' must be the last letter.
186 # Comment out to disable
187 despeckle_filter EedDl
188
189 # Detect motion in predefined areas (1 - 9). Areas are numbered like that: 1 2 3
190 # A script (on_area_detected) is started immediately when motion is 4 5 6
191 # detected in one of the given areas, but only once during an event. 7 8 9
192 # One or more areas can be specified with this option. Take care: This option
193 # does NOT restrict detection to these areas! (Default: not defined)
194 ; area_detect value
195
196 # PGM file to use as a sensitivity mask.
197 # Full path name to. (Default: not defined)
198 ; mask_file value
199
200 # PGM file to completely mask out a area of image.
201 # Full path name to. (Default: not defined)
202 # mask_privacy value
203
204 # Dynamically create a mask file during operation (default: 0)
205 # Adjust speed of mask changes from 0 (off) to 10 (fast)
206 smart_mask_speed 0
207
208 # Ignore sudden massive light intensity changes given as a percentage of the picture
209 # area that changed intensity. Valid range: 0 - 100 , default: 0 = disabled
210 lightswitch 0
211
212 # Picture frames must contain motion at least the specified number of frames
213 # in a row before they are detected as true motion. At the default of 1, all
214 # motion is detected. Valid range: 1 to thousands, recommended 1-5
215 minimum_motion_frames 1
216
217 # Specifies the number of pre-captured (buffered) pictures from before motion
218 # was detected that will be output at motion detection.
219 # Recommended range: 0 to 5 (default: 0)
220 # Do not use large values! Large values will cause Motion to skip video frames and
221 # cause unsmooth movies. To smooth movies use larger values of post_capture instead.
222 pre_capture 2
223
224 # Number of frames to capture after motion is no longer detected (default: 0)
225 post_capture 2
226
227 # Event Gap is the seconds of no motion detection that triggers the end of an event.
228 # An event is defined as a series of motion images taken within a short timeframe.
229 # Recommended value is 60 seconds (Default). The value -1 is allowed and disables
230 # events causing all Motion to be written to one single movie file and no
    pre_capture.
231 # If set to 0, motion is running in gapless mode. Movies don't have gaps anymore. An
232 # event ends right after no more motion is detected and post_capture is over.
233 event_gap 60
```

```
234
235 # Maximum length in seconds of a movie
236 # When value is exceeded a new movie file is created. (Default: 0 = infinite)
237 max_movie_time 0
238
239 # Always save images even if there was no motion (default: off)
240 emulate_motion on
241
242
243 #####
244 # Image File Output
245 #####
246
247 # Output 'normal' pictures when motion is detected (default: off)
248 # Valid values: on, off, first, best, center
249 # When set to 'first', only the first picture of an event is saved.
250 # Picture with most motion of an event is saved when set to 'best'.
251 # Picture with motion nearest center of picture is saved when set to 'center'.
252 # Can be used as preview shot for the corresponding movie.
253 output_pictures off
254
255 # Output pictures with only the pixels moving object (ghost images) (default: off)
